# 2023 Integrify User Conference

Advanced Form Behaviors

Advanced Form Behaviors

- Advance your forms to the next level with a more interactive user experience by using built in controls and ability to configure the form data to be dynamic.
    - Dynamic List Boxes
    - Query Parameters
    - Search Boxes
    - Regular Expressions
    - CSS

Dynamic List Boxes & using Query Parameters

- Demo form

- Query Parameter Process
  - Passed from form to form
  - Poor man lookup

- Variable Mapping
  - Demo using

Make your organization more efficient and productive.

Using Search Boxes / Contact Search

- Search Box Tips:
- Should give a descriptive client ID (Naming conventions) for the department since the SBOX mapping shows the Client ID not the label.
- Use case – instead of %
- May need to comment out fields to run query successfully at first when using parameters
- Recommend read only for fields populated from the search box
- Contact Search – usually in conjunction w/ form assigner
  - Using Groups to filter
